

FlexPod VDI for Remote Learning

Expand virtual and remote teaching and learning capabilities supported with a simple, turnkey solution

VDI building blocks can be combined to scale to any number of virtual desktop users.

Our government is asking higher educational institutions to rapidly move teaching and learning online for the next several months. Does your organization have the capacity to meet the need?

NetApp and Cisco are offering education customers a validated Virtual Desktop Infrastructure (VDI) solution to expand virtual and remote teaching and learning. As educational institutions face unprecedented challenges, FlexPod VDI is a proven technology that delivers virtual desktops, applications, and even full computing lab environments remotely to your students—anywhere in the world.

You can start small with a solution to support 500 concurrent students and scale up. Or you can mix and match to support your entire campus and student body.

NetApp and Cisco have partnered to deliver FlexPod, an on-premises, validated architecture that includes all hardware components (storage, servers, networking) required for a VDI environment.

FlexPod VDI supports both VMWare and Citrix. Leasing and other payment options are available.

Contact your local NetApp or Cisco sales representative for more information.
